

InfoRad® Version X.4 Software Suite Features & Enhancements

- **InfoRad SMS Messaging Gateway**
Using the InfoRad SMS gateway allows you to send to any carrier cell phone, pager, or other wireless device without having to know the devices service providers. It eliminates the need to obtain a special account with each carrier for enterprise level messaging over the Internet. Additionally the gateway provides other messaging enhancements such as text to voice, message copy to other devices, and response query options. **Contact InfoRad sales today for your FREE 1000 message 30 day evaluation.**
- **Unication encryption**
End-to-end encryption support for the HIPAA compliant Unication paging receivers E3 and Legend Secure
- **Latest Microsoft Windows installer technology**
Version X.4 installation now has MSI support making it much simpler for single user desktop deployment and network installations
- **Conforms to the latest Microsoft Windows security requirements**
- **HIPAA compliance**
Support for HTTPS encrypted message transport when using WCTP messaging protocol and SMS services
- **SMTP enhancement**
Support for TLS secure connection (In addition to already-supported SSL)
- **Predefined Messages**
Now includes Password protection
- **Wireless Enterprise SV Client**
Now includes Backup for client data (scheduled messages, predefined messages, message templates)
- **Wireless Enterprise SV**
Database access has been streamlined to minimize server-unavailable time to messaging clients
